# Cryptomacy LightPaper

## Introduction

Cryptomacy is a trailblazing initiative set to redefine global decision-making through the power of blockchain technology and smart contracts. Our vision transcends national boundaries, bringing the ease, speed, and transparency of blockchain to the election processes of nations.

But Cryptomacy isn't limited to political democracy. It aspires to empower every individual across the globe, granting them the ability to instantaneously voice their opinions on global matters, such as international summits like G20. Furthermore, it paves the way for companies and organizations to swiftly collect feedback or signatures from their customers or supporters, fostering efficient communication and engagement.

Cryptomacy's objective is to construct a secure, transparent, and decentralized platform where individuals from every corner of the world can contribute to issues that affect them directly. By amplifying the voice of the people in the decision-making process, Cryptomacy nurtures a more democratic, accountable world.

## VOTOS: The Tokens Empowering Democracy

VOTOS tokens not only form the backbone of the Cryptomacy ecosystem but also offer enticing incentives for long-term investment. Boasting a total supply of 16 billion with 18 decimal precision, the ERC20 token is strategically crafted to reward enduring investors. One such benefit is the selling tax fee, a charge imposed on token sales. This fee is apportioned among a liquidity pool, yield generation (which disburses rewards to token holders), and charitable causes.

Moreover, VOTOS tokens come equipped with a deflationary mechanism designed to augment token value over time. Starting one year after the project launch, 30% of the total token supply will be progressively burnt over the next five years, at an annual rate of 7.5%. This process is set to enhance potential returns for our dedicated token holders.

Furthermore, we're excited to introduce the VOTOS staking program, scheduled for operation three months post-launch. This feature will allow token holders to earn interest on their tokens, further incentivizing long-term holding and providing an additional income stream for our committed community.

## Token Distribution

- 30% Burnt
- 10% Staking Rewards
- 40% Public Sale
- 3% Marketing and Promotion
- 16% Development
- 1% Team

## Blockchain of Democracy

Cryptomacy is set to establish a sophisticated blockchain network, composed of a central blockchain interlinked with distinct sub-blockchains for each participating country. This architecture will effectively administer voting and decision-making proceedings on a national level, while simultaneously providing a comprehensive global perspective of the outcomes. Crucially, the system will ensure the anonymity of voters, protecting their identities. Furthermore, it extends an opportunity to the private sector to construct their own dedicated voting ecosystems within this framework.

## Use Cases

- Efficient and transparent election processes
- Immediate voting on referendums and initiatives
- Governments and companies can run polls
- Biometric access for secure voting
- Global decision-making, such as G20 meetings
- Payment of government bills

## Project Strategy and Roadmap

- Year 1: Presale, decentralized exchange listing, marketing, partnerships, and centralized exchange listing.
- Year 2: Development of the blockchain of democracy, government and company poll systems, and mobile app with biometric access.
- Year 3: Expansion of partnerships and sponsorships, global adoption by governments, and integration with company decision-making processes.
- Year 4: Enhancing the platform with new features and functionalities, improving scalability, and addressing emerging challenges.
- Year 5: Achieving global adoption of Cryptomacy, with millions of users participating in democratic processes across the world.

## Conclusion

Cryptomacy, powered by VOTOS tokens, is set to revolutionize global decision-making by giving individuals a direct voice in the process. By leveraging blockchain technology, smart contracts, and a secure ecosystem,

Cryptomacy will create a more democratic, accountable, and equitable world for all.
